DETAILED ACTION

Response to Arguments

Applicant's arguments filed 12/10/2003 have been fully considered but they are moot in view of the new ground of rejection below.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-? are rejected under 35 U.S.C. 103(a) as being unpatentable over Knotts et al. US patent 6,065,002 and further in view of Sheffield et al. US patent 5,566,330.

As per claim 1, Knotts teaches a programmable batch processing engine for a computer network comprising:

specification defining template for user-desired processing services to be performed (fig.2 #32, col.4 line 68 to col.5 line 4, lines 53-60);

Art Unit: 2153

wherein the specification identify processing properties for processing services (col.5 lines 53-64) to define the execution of a batch application (col.4 lines 43-55, "information appliance");

a specification server subsystem adapted to store said template for enable access to the template over the network (apparent from col.5 lines 15-16);

processing subsystem adapted to perform processing of the batch application (fig.2 application tool 26, col.5 lines 17-20, col.8 lines 10-40);

middleware subsystem providing communication of the specifications to the processing system (interface 24 - See col.5 line 45 to col.6 lines 17).

Knotts is silent on the design tool subsystem to create the template. However, it is inherent that Knotts must have a design tool subsystem in order to create the template. In similar field of invention, Sheffield teaches a design tool subsystem (GUI) for creating reusable and modifiable database interface object (i.e. template). (See col.1 line 55 to col. 2 line 7). Hence, it would have been obvious for one of ordinary skill in the art to combine the teaching of Sheffield with Knotts because it would have enable a user to create the template without extensive knowledge of

Application/Control Number: 10/007,547

Art Unit: 2153

database operation nor code database operations in a programming language (see col.7 lines 21-25).

As per claims 2-3, it is known that an end-user and an application programmer (who design the template) could be the same person (Sheffield col.2 lines 10-12). Hence, it is inherent that the processing system and the design tool could be running on the same (i.e. a first) computer or on different computers (i.e. a second computer).

As per claim 4, Knotts teaches storing the template on a server (see fig.1 col.5 line 13-15, lines 46-47). Hence, it is apparent that the specification for creating the template are send from the designer (i.e. first computer) to the server (i.e. second computer) for storage and are send from the server to the processing system ("information appliance") for processing.

As per claim 5, Knotts teaches database middleware subsystem (col.5 lines 5-15 API 14 ODBC) for direct access to the database (col.6 lines 1-17).

As per claims 6 and 9, Knotts teaches input/output middleware system (apparent from fig 1, input#22, and output #36 and #38, col.6 lines 42-52). It is apparent that the system would have means for routing and converting input-output stream to a compatible format in order to transfer/receive data to/from the input-output devices.

Application/Control Number: 10/007,547

Art Unit: 2153

Page 5

As per claims 7-8, Knotts does not specifically disclose the processing subsystem being implemented on a second computer and to send the processing result and error to a first computer. It would have been obvious for one of ordinary skill in the art to use a second computer (i.e. a more powerful processor or server) as a processing subsystem because it would have alleviate burden on the first computer (e.g. when the first computer device has low processing power or on behave of a web-client for example).

As per claims 10-15, 16-18 and 19-21 they are rejected under similar rationales as for claims 1-9 above.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dung Dinh whose telephone number is (703) 305-9655. The examiner can normally be reached on Monday-Thursday from 7:00 AM - 4:30 PM. The examiner can also be reached on alternate Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenton Burgess can be reached at (703) 305-4792.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group 2100 Customer Service whose telephone number is (703) 306-5631.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks Washington, DC 20231

or faxed to: (703) 872-9306

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington. VA, Fourth Floor (Receptionist).
